

ALL YOU NEED TO KNOW ABOUT **LIPOSUCTION**

Dr. Rajat Gupta

Board Certified Plastic
Surgeon, RG Aesthetics, India

Liposuction surgery sculpts the body by eliminating unwanted pockets of exercise and diet-resistant fat from the buttocks, hips, love handles, saddlebags, thighs, calves, ankles, breasts (including male breasts), back, arms and neck.

Liposuction is done if:

- If you have localized areas of fat deposits that are disproportionate with the rest of your body
- If you would like more definition or a sleeker contour in certain areas of your body
- If your skin elasticity is good (Liposuction removes fat, but does not tighten skin).

What Liposuction Surgery Can / Can't Do

✓ Can

- Increase fullness and volume of the breast
- Improve projection of the breast
- Improve breast to hip proportion
- Make breasts look symmetrical
- Enhance your self-image and self-confidence

✓ Can't

- Does not correct severely drooping breasts.

Procedure of Liposuction

Anaesthesia

-Local or General

The incision

- Small, inconspicuous incisions are made
- A thin hollow tube, or cannula, is inserted through the incisions to loosen excess fat using a controlled back and forth motion

Removal of Fat

- The dislodged fat is suctioned out of the body

Techniques Used in Liposuction

PURE+
CONTOURING

PURE Contouring for High
Definition Liposuction

PURE contouring is a paradigm shift in the concept of body contouring because it combines Power Assisted Technology, Ultrasound Assisted Technology and Radiofrequency assisted Skin Tightening Technology.

P is Power Assisted Liposuction
using MicroAir

U is Ultrasound Assisted
Liposuction using Vaser

RE is Radiofrequency Enhanced
Contouring using BodyTite

Recovery after Liposuction:

Recovery After Liposuction Surgery?

- The recovery time depends upon the area on which you are undergoing the surgery and any associated procedures if any.
- Liposuction patient can go out of the hospital the same day.
- A patient experiences mild to moderate pain for first 72 hours for which medicines are prescribed.
- Post 3 days, the patient has mild swelling that gradually disappears in the next 2-3 weeks. Depending upon the area of the surgery, the most patient can join back work after 2-3 days if in sitting job.
- Strenuous activities are to be restricted for 3-4 weeks. The timelines, however, differ on an individual basis.
- Patient is advised to wear a compression or pressure garment during first 4-6 weeks post-surgery to keep the contours as designed during surgery.

About Dr. Rajat Gupta

Dr. Rajat Gupta is a gold-medallist, board-certified plastic surgeon in India. As the National Secretary of the Indian Association of Aesthetic Plastic Surgery (IAAPS), he has been accredited with consistently raising the standards of aesthetic surgery in the country.
